

Einsteinium (Es)

Atomic number: 99

Atomic mass: 252

Description: This is name after renowned physicist Albert Einstein.

Discovered by: Albert Ghiorso and his colleagues in 1952

Properties:

Melting point: 1133K Boiling point: NA

Density: NA State: Solid

Group: Actinides Period: 7 Block: f

Electronic configuration: $[\text{Rn}] 5f^{11}7s^2$

Isotopes: ^{252}Es

Appearance: Radioactive metal, only a few milligrams of which are made each year.

Uses:

1) No uses outside research.
